

SAP API TESTING AND SERVICE VIRTUALIZATION PLATFORM

**3rd-party System and
EDI Partner Simulation**

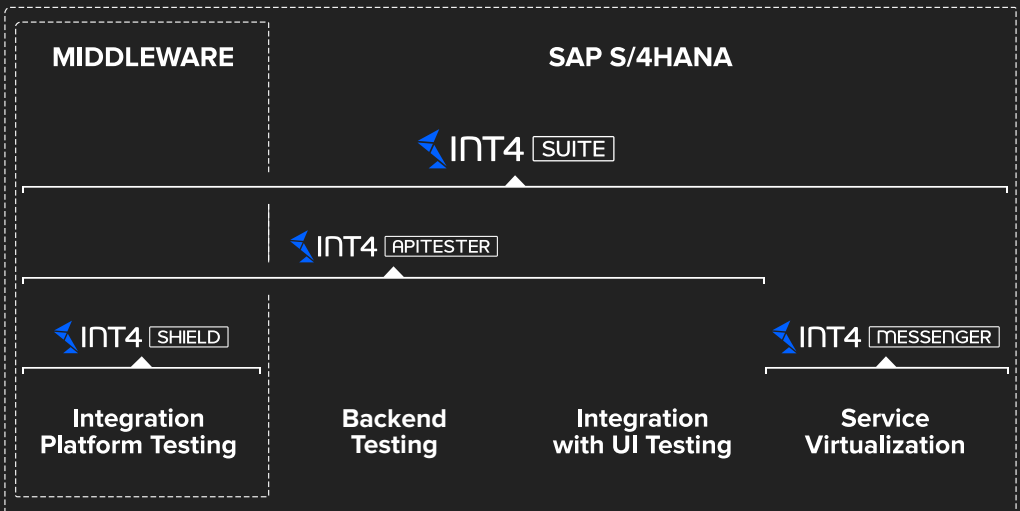

.....
**SAP API Test
Automation**

.....
**Integration Platform
Test Automation**

Eliminate

SAP S/4HANA project delays

caused by external dependencies, increase the sustainability and reduce risks by allowing full, fast, automated testing in early project stages.

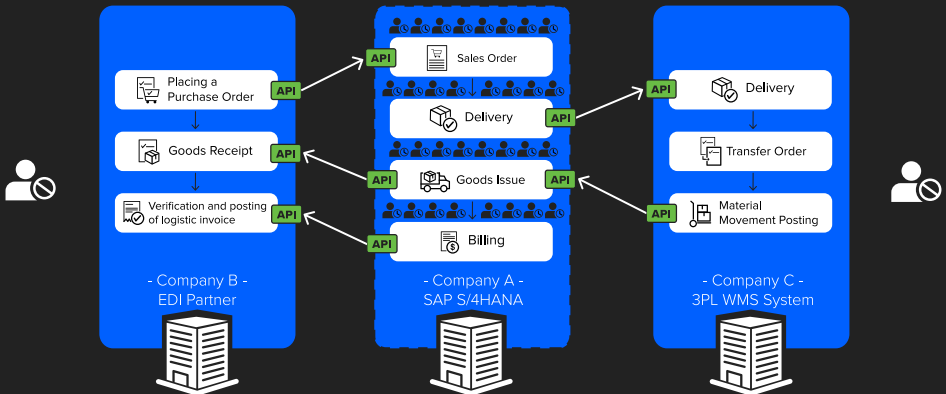

Int4 Suite is a unique solution that mitigates the risks and lowers costs from the early stages of your project.

ELIMINATE SAP S/4HANA PROJECT DELAYS CAUSED BY EXTERNAL DEPENDENCIES

- ▶ Save money thanks to early validation of business requirements
- ▶ Speed up the communication between Development and QA/testing teams
- ▶ Reduce third-party services' costs
- ▶ Reduce infrastructure costs and eliminate the carbon footprint

Int4 Messenger brings in Virtualization Objects and Virtualization Scenarios, enabling quick configuration and easy control over the virtualization of external systems.

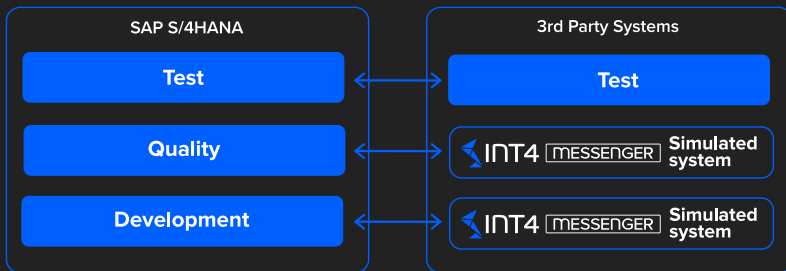

INCREASE SUSTAINABILITY & REDUCE COSTS

Int4 Messenger allows companies to simulate the behavior of 3rd-party systems, **eliminating dependencies that constraint on development and testing teams, increasing sustainability, and reducing risks** by allowing full, fast testing in early project stages.

REDUCE INFRASTRUCTURE COSTS

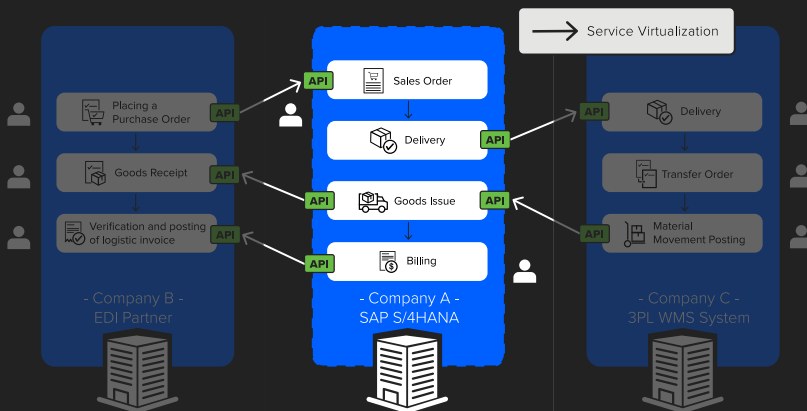

Since most of the test landscapes for 3rd party systems can be simulated, SAP S/4HANA projects can **reduce the overall project costs and make it more sustainable** compared to the traditional approach where all 3rd party systems need to be installed and supported by external resources.

INCREASE THE PRODUCTIVITY

Int4 Messenger significantly decreases Testing time during development (DEV) and integration (SIT) testing phases of the project.

Developers and Functional consultants can run a much larger number of tests, which directly leads to **early defect detection and large annual savings** related to fewer issues on the production landscape.

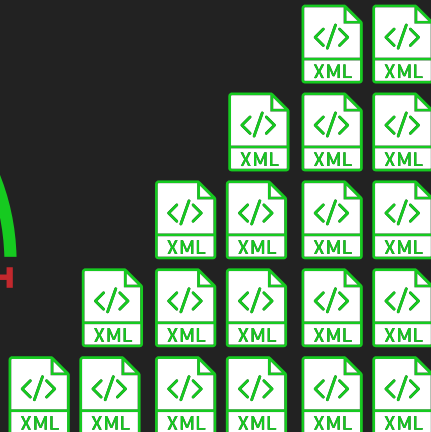

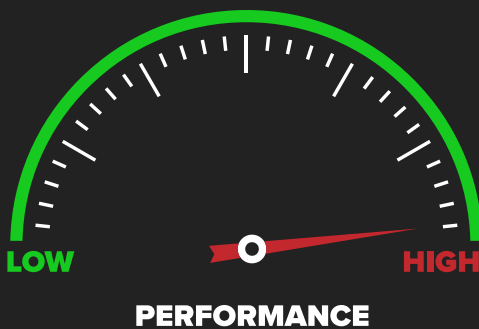

“ The ability to increase the manual testing speed of a complete SAP business process without being dependent on a 3rd party, non-SAP systems secured the testing phases and increased the level of developed and configured SAP S/4HANA processes. ”

REDUCE RISK AND TIME WITH TEST AUTOMATION IN THE EARLY STAGES OF YOUR PROJECT (API)

- ▶ **Minimal effort** in creating test cases using the Repeater® functionality.
- ▶ **Complete testing scope**, validation of both the SAP PI/PO and SAP S/4HANA backend.
- ▶ **Certified SAP Add-on**, deployed on SAP Solution Manager or other ABAP-based systems.
- ▶ **Full integration** with UI testing tools like UiPath or Worksoft.

INCREASE PRODUCTIVITY & REDUCE RISK

Int4 APITester is a script-less **SAP API** testing tool for **SAP S/4HANA** implementations and middleware migrations, that allows companies full automated testing in the service layer (API) **minimizing the risk and cost of existing bugs and manual testing process**. Thanks to the power of automation, companies can **create thousands of test cases within minutes** increasing the productivity of the testing teams.

ELIMINATE EXTERNAL DEPENDENCIES

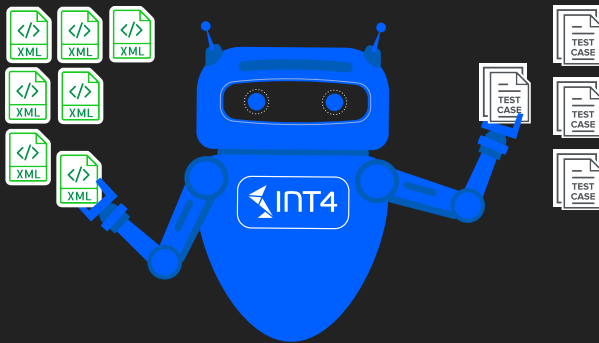

Thanks to the virtualization features, **Int4 APITester** will **save you a lot of time – you will no longer need to depend on other teams**, set up test versions of integrated applications, or pay your EDI partners for test data.

SAP API TEST
AUTOMATION

MAXIMUM CONTROL OF TEST CASE EXECUTIONS

Automate and provide a **complete and comprehensive result report** that can support each of the test script executions. This report provides sufficient information for a support organization to help solve any issues when a test case execution fails.

CREATE A COMPLETE E2E TESTING

Int4 APITester works well with and complements major UI testing tools, to enable smooth end-to-end testing of integrated processes. Now you can validate integration steps – like incoming orders or outgoing invoices, even for processes that require additional manual steps during the test.

INTEGRATION PLATFORM
TEST AUTOMATION

UNLOCK THE BLOCKED MIGRATION DUE TO LACK OF RESOURCES AND BUSINESS INVOLVEMENT TO INCREASE CONFIDENCE

With the imminent change upcoming or in progress, **we're bringing you a solution that will shield your organization from issues in the sensitive area of integration.**

- ▶ Increase development efficiency by avoiding delays and improving the quality.
- ▶ Save on early defect detection and production incident risk mitigation.

About INT4

Int4 is a Swiss-based company with a team of SAP experts that specialize in automated testing for SAP integration

Int4 team is represented by world-famous SAP integration experts, SAP Press book authors and SAP Mentors. At Int4, we constantly try to inspire the SAP community by sharing knowledge and introducing best practices in the area of SAP integration and development.

116+

Projects

We have successfully completed over 116 international, global SAP projects for enterprise-level companies.

55

People on board

We have over 50 people on board, including 37 prominent experts in the SAP industry and it's just the beginning.

12

Years of Int4

Our journey started over a decade ago. During this time we've gained a lot of experience in helping international companies in their SAP transformation projects.
